Summary

I am an experienced iOS Engineer. I have worked on various iOS app that have millions of active users. My Core tech stack is iOS app development using Swift and Objective-C programming languages. Building high quality apps with emphasis on quality, testing and automation.

Professional Experience

- *Oozou* as *iOS Developer* (May 2020 - January 2021)

Worked on revamp of myAIS iOS app. AIS is the biggest telecom operator in Thailand.

myAIS iOS app has more than 10M+ active users. Please see the app [here](#).

- *Luminary Podcasts* as *Mobile Application Developer* (Sep 2018 - Jan 2020)

Luminary is a podcasts broadcasting and streaming platform from New York having \$200M VC Funding.

- I was part of team that developed the iOS app of Luminary. Please see the iOS app [here](#).

- *Devcrew* as *Mobile Application Developer* (Sep 2016 - Aug 2018)

Devcrew is a software development house and during my stay I worked on below mentioned apps.

- Glo Bible App: This is an iOS app for reading the Bible. It provides excellent reading experience, along with multimedia content support. For details please see [here](#).
- Fabricare: It is a laundry services platform currently operating in two cities of Pakistan namely Islamabad and Lahore. I had worked on its iOS app which can be found [here](#).

- *NADRA* as *Mobile Application Developer* (May 2015 - Mar 2016)

NADRA is a government organisation in Pakistan. My responsibilities include design, develop and maintain a number of iOS applications. Worked on apps related to public relations, financial services, and other government operations. These apps include technologies like biometric verification, facial recognition, and smart card reader. Mostly

client-server architecture is followed with major emphasis on user data security and privacy.

- DapperApps as *Mobile Application Developer* (Aug 2014 - Jan 2015)

DapperApps is a software development house and during my stay I worked on below mentioned projects.

- Tiinkk: An iOS social network application which aid users in making daily life decisions (related to clothing, style, and fashion) in an interesting way.
- Developed an iPad app for trainers in a private gymnasium which assists and helps manage different trainees. Manages physical status of trainees involved and integrates sale/purchase of related tools.

- Skylight Software as *Software Engineer* (Apr 2011 - Jul 2014)

I was part of team that designed & developed a new document format application similar to Microsoft Word. It is a multi-platform application which runs on major platforms (macOS, Windows, and iOS). My contribution was mostly in macOS and iOS platforms. Used WebKit for implementing Inter Process Communication. Other technologies used were memcache and smart pointers in C++.

Education

- Master's in Computer Sciences (Sep 2015 - Jun 2019)
National University of Sciences & Technology, Islamabad Pakistan
- Bachelor's in Information & Communication Systems Engineering (Sep 2007 - Aug 2011)
National University of Sciences & Technology, Islamabad Pakistan

Skills
